

MORE THAN 30 YEARS AS NEW YORK'S LEADER IN MEDICAL BREAST IMAGING

ELIZABETH WENDE BREAST CARE, LLC
Sitting: Dr. Wende Young, Dr. Posy Seifert
Standing: Dr. Stamatia Destounis, Dr. Philip Murphy
and Dr. Patricia Somerville

For more than 30 years, women and their physicians have relied on the skill and unrivaled experience of the breast imaging specialists of EWBC. Our mission is to provide state of the art and compassionate care to our patients.

We tailor each patient's appointment to accommodate her individual needs. Women who are anxious about waiting days or weeks for their mammogram results can get all their questions answered in one appointment; women who are pressed for time, can get in and out quickly and have their results mailed to them within a day or two.

EWBC is nationally known as a leader in the field of breast imaging. Our perseverance of new advancements and technologies has made us one of the premier breast imaging facilities in the US. EWBC has been recognized by the American College of Radiology as a Breast Imaging Center of Excellence.

Mammography / CAD

Screening and diagnostic mammography is performed with state of the art imaging equipment, including full-field digital mammography from top manufacturers such

as Hologic, General Electric and Fuji. Each exam is tailored to the patients needs, taking into account tissue type, past surgery, implants and physical limitations.

Every screening mammogram at Elizabeth Wende Breast Care is read and diagnosed by at least two physicians using CAD technology—Computer Aided Detection. This computer-scanning of the mammogram helps our doctors provide the most accurate reading available today, so our patients can be confident in their test results.

Ultrasonography

Breast ultrasonography is used as an adjunct to mammography, usually to distinguish if a lump or mass is solid tissue or if it is simply a fluid-filled cyst. Use of ultrasonography allows our physicians to avoid recommending surgical procedures unnecessarily. Ultrasonography is performed only when it is needed to help make a diagnosis.

Stereotactic Core Biopsy

This procedure is designed to save women from undergoing unnecessary surgery. It is a relatively painless and minimally invasive alternative to surgical biopsy, requiring no hospitalization. It is faster and less traumatic than traditional surgical biopsy. Use of core biopsy, along with needle aspiration cytology, saves the health care system of the Rochester area over one million dollars each year.

Elizabeth Wende Breast Care is proud to be a pioneer in developing the use of this technology.

Breast MRI

BMRI is used as a diagnostic and treatment structuring tool for some women who have already been diagnosed with a cancer. This technology can help evaluate the extent of a breast cancer, can help plan treatment, and can be used to monitor a patient's response to chemotherapy. It is also used to check for recurrences or primary cancers, and can be used as a screening tool for some high-risk patients.

DXA Bone Mass Densitometry

DXA BMD is a simple, painless, accurate method for evaluating bone mass and osteoporosis. We offer DXA scanning as a convenience to our many patients who are within the guidelines for bone mass densitometry.

Public Education Series

Elizabeth Wende Breast Care offers free educational presentations to the public. These programs are designed to help keep women informed of advances in women's healthcare, changes in technology and tips for improving their own health. Breast cancer and osteoporosis are the main focus of these sessions.

For session dates, to make a reservation, or to schedule a free presentation for your club or group, please call us at 585-758-7037, or email vandrews@ewbc.com.
